Stickeler / Thill / Thomssen / Untch

■ Version 2021:

Jackisch / Schmidt

Chemotherapie

Krankheitsfreies- und Gesamtüberleben

	Oxford LoE
▪ Eine Verbesserung der Überlebenszeit beim metastasierten Mammakarzinom wurde in Studien gezeigt	1b
▪ Mehrere Linien der sequenziellen Therapie sind von Vorteil (gleiche Wirksamkeit, geringere Toxizität)	1b
▪ Besonders für Kombinationen einer Chemotherapie mit zielgerichteten Substanzen wurde ein entsprechender Überlebensvorteil festgestellt	1b

Endokrine Resistenz bei metastasiertem Mammakarziom

Primäre endokrine Resistenz:

- Rezidiv innerhalb der ersten zwei Jahre unter einer adjuvanten endokrinen Therapie (ET)
- Progress innerhalb der ersten 6 Monate unter einer laufenden endokrinen first-line-Therapie beim metastasierten Mammakarzinom

Sekundäre (erworbene) endokrine Resistenz:

- Rezidiv unter einer adjuvanten ET, aber erst nach den ersten 2 Jahren oder innerhalb 12 Monate nach abgeschlossener adjuvanter ET
- Progression \geq 6 Monate nach Initiierung einer ET in der metastasierten Situation

International consensus

Definition of visceral crisis (ABC 5)

- **Visceral crisis** is defined as severe organ dysfunction, as assessed by signs and symptoms, laboratory studies and rapid progression of disease. Visceral crisis is not the mere presence of visceral metastases but implies important organ compromise leading to a clinical indication for the most rapidly efficacious therapy.

International consensus

1. Cardoso F, Paluch-Shimon S, Senkus E et al. 5th ESO-ESMO international consensus guidelines for advanced breast cancer (ABC 5). Ann Oncol 2020; 31 (12): 1623–1649..

Metastasiertes Mammakarzinom Systemtherapie

GR: A

AGO: ++

- **Bewertung der Compliance vor und während der Therapie (insbesondere bei älteren Patientinnen, bei reduziertem AZ oder relevanten Komorbiditäten bzw. Zweitmalignomen)**
- **Regelmäßige Beurteilung der Lebensqualität, subjektiver und objektiver Toxizitäten, des AZ und von Symptomen**
- **Dosierung entsprechend publizierten Protokollen**
- **Beurteilung der Tumorlast ca. alle 2 Monate, d.h. alle 2–4 Zyklen; bei langsam progredienter Krankheit sind längere Intervalle akzeptabel**

International consensus

Systemtherapie beim mBC

Allgemeine Überlegungen

AGO: ++

- Teilnahme an Studien wird empfohlen
- Die Wahl der medikamentösen Therapie ist abhängig von:
 - ER/ PR, HER2, PD-L1-Status, gBRCA-Status, PIK3CA, ggf. MSI, NTRK, andere (siehe Mutationsdiagnostik)
 - Frühere Behandlungen (und ihre Toxizitäten)
 - Rezidivfreies Intervall nach Ende der adjuvanten Therapie
 - Progressionsfreies Intervall und Remission der vorherigen Therapie
 - Aggressivität der Erkrankung, Lokalisation der Metastasen
 - Geschätzte Lebenserwartung
 - Begleiterkrankungen (einschließlich Organfunktionen)
 - Erwartungen und Präferenzen der Patientinnen/Patienten

International consensus

1. Cardoso F, Paluch-Shimon S, Senkus E et al. 5th ESO-ESMO international consensus guidelines for advanced breast cancer (ABC 5). Ann Oncol 2020; 31 (12): 1623–1649.
